# Information and Computer Security

# Scope of the Journal

Computer security has been a major concern of the technical community since the 1950s. The ubiquity of the internet has engendered the prevalence of information sharing among networked users and organisations. This has rendered possible countless invasions of privacy and security around the world. The risk of invasion has generated enormous concern about information and computer security among businesses, governments, legislators, academics, researchers, scientists and the public.

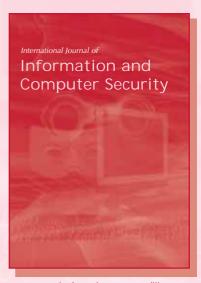

The IJICS aims to promote and coordinate developments of information and computer security in the fields of information technology, political science, informatics, sociology, engineering and science. IJICS publishes papers representing synergy between theory and practices to help policy-makers and executives manage information and computer security and its related technologies.

#### Subject coverage:

The coverage of IJICS includes, but is not limited to, the following subjects:

- · Assurance of service
- Computer crime prevention and detection
- · Computer forensics
- Computer security
- Confidentiality protection
- Cryptography and data protection
- · Database and data security
- · Denial of service protection
- E-commerce security
- E-surveillance
- Fraud detection and prevention
- Hacker and terrorist detection
- Information ethics
- Information privacy issues
- Information security
- Information sharing
- Information system security
- · Information warfare
- · Integrity of service
- Internet abuse
- Internet security
- Malicious code detection
- National security
- Network intruder prevention
- · Network security
- · Risk management
- · Safety-critical systems
- Secure communication technology

- Secure computer systems
- Security control measures
- · Security policy models and mechanisms
- · Software and hardware architectures
- Transaction security
- Unauthorised access protection
- · Virus/worm controls
- Wireless/mobile network security
